

## Alarm Tracking Form

Bed and/or chair alarms may be indicated as a diagnostic tool in fall risk assessment and management. Alarms should be used for determining patterns, trends, identifying patient needs, and establishing a plan of care. Note: Alarms should only be used on a short-term basis. The following data should be monitored and analyzed by the interdisciplinary team.

Type of Alarm (Bed, chair, wheelchair, etc.)	Date (alarm went off)	Time (alarm went off)	What was the patient trying to do or wanted to do, when the alarm went off?

<b>IDT Analysis of Data (patterns, times, reasons alarm went off):</b>		
<b>Action Plan:</b>		
<b>Date of Review:</b>		
<b>Signatures of IDT:</b>		
<b>Resident Name:</b>	<b>MR #:</b>	<b>Room #:</b>
